Lab report - Your page, via the interview prompt

Chapter: A page is never alone

Student: **Sebastian Mathew**

Report generated: October 5, 2026

1. What did you learn in this chapter that you didn't know before?

Wow, this was so great and a VERY helpful tool. I liked how the prompt got Claude interviewed me, drawing from my resume that it had previously uploaded and engaged with.

2. What did the AI get wrong, or not quite right, and how did you catch it?

It does raise a concern. Does this mean my resume is in Claude's "public" memory out there somewhere or is it just "local", whatever local means? Claude's reply made me realize that while I had disabled use of my chats for training, there was another option to generate memory from my chats, which I didn't know about and thought was interesting.

Here is what I asked Claude

Sebastian: Is my resume in your public memory or is it local?

Claude: Neither, exactly. It's private to your account, but it isn't stored only on your device. Here's how it works. The career details you've shared with me in our conversations (your roles, results, and projects) are saved in Claude's memory, which is tied to your Claude account and kept on Anthropic's servers. That's why it carries over between chats and devices. It isn't public: other people using Claude can't see it, and it isn't published anywhere. It's only used in your own conversations. The webpage is separate. The index.html file I built is a download for you to keep. It isn't online anywhere unless you upload it to a host yourself.

You're in control of the memory side. You can ask me to forget specific details (for example, "forget the postal service project") and I'll remove them. To stop memory altogether, there's a "Generate memory from chats" setting in your Settings, and incognito chats don't use memory at all. For questions about how Anthropic handles stored data more broadly, the privacy information at support.claude.com is the authoritative source.

3. What did the AI tell you to name your images, and did they show up the first time? If not, what was the mismatch?

Claude put the pics in a subfolder called images. I didn't realize that so I thought the links were broken at first for some reason. Only when I went into the html did I see that and then went back to Claude's output and sure enough, it had created a subfolder.

4. What's one thing you'd add to your page if you had another twenty minutes?

Ooh, maybe go back and update the colors and look and feel. And go and find and add more pictures.

Steps marked done

- ✓ Picture it
- ✓ Ask for it
- ✓ Run it
- ✓ Read it
- ✓ Make it yours
- ✓ Grow it
- ✓ Keep it
